MEMORANDUM FOR: Executive Board Members

OC Executive Board Agenda, 1300 Hours, SUBJECT

9 July 1974, OC Conference Room

I. DISCUSSION OF COST ATTRIBUTION SYSTEM FOR OC PROVIDED SERVICES.

D/CO Objective Number 1 (DDM&S Objective Number 2) under the Management by Objective (MBO) Program is to attribute costs of OC provided communications services to Agency user components and to other agencies. Decision is needed on two major points:

- a. Selection of quantifiable, cost related activities within each of the six communications services and methods of applying cost factors to each of these activities.
- b. Determination of the approach to be taken at the July DDM&S OMB Meeting in reporting progress and plans for accomplishing the cost attribution objective.
- PROGRAM MANAGEMENT RESPONSIBILITIES. II.

Background material attached.

NATIONAL POLICY ON AUTHORIZING U.S. CONTRACTORS ACCESS TTT. TO CLASSIFIED FEDERAL TELECOMMUNICATIONS OR COMMUNICATIONS SECURITY MATERIAL.

Background material will be provided at the meeting. 25X1C

STUDY. IV. REPORT BY OC-E AND OC-O ON THE 25X1C

Report was reviewed. At the 4 June meeting the OC-E Following the discussion Mr. asked for: 25X1A

Minutes of Executive Board Meeting Number Eight 1300 Hours 9 July 1974

25X1A

1. The meeting convened with the following members present:

The undersigned attended in the capacity of Acting Secretary.

25X1A

25X1A

2. COST ATTRIBUTION SYSTEM FOR OC PROVIDED SERVICES. Mr. opened the discussion by noting that the DCI has adopted cost attribution as a Fiscal Year 1975 Objective and that this might give us added time for establishing an OC system. Mr. briefly reviewed developments to date. Chief, Operations has been established as the manager responsible for this Objective and has developed tentative costing methods for five of the six services provided by the Office. It was agreed that the systems developed to date would be impractical to administer and that more time was needed to select and implement a method to reflect

25X1A

truly comparative costs.

then discussed three possible approaches to establishing a cost attribution system:

- a. Attributing the entire current year budget on a cost per unit basis for services provided,
- Amoritizing the fixed plant and attributing this cost and current costs to users and reserving as backbone costs some part of the budget and,
- c. Attributing "backbone" costs to OC as the system operator and attributing operating costs of providing service at each station and at Headquarters to users of the services.

Approved For Release 2001/04/09 : CIA-RDP79-01577A000100040003-4

25X1A

After considerable discussion alternative "c" was adopted as the best approach. It was recognized that this would involve a large proportion of the cost being attribute

25X1A

would involve a large proportion of the cost being attributed to CIA users as opposed to other users; however, this is logical in that even if other users of the service were to get out of the network, we would have to continue operating the system for the Agency. It was agreed that Mr. as Program Manager, would need to establish a new schedule for accomplishing the cost attribution objective during Fiscal Year 1975.

25X1A

Mr. then summarized the conclusions reached:

25X1A

a. The DDM&S will be advised at the MBO meeting scheduled for 22 July that we have developed cost attribution systems during Fiscal Year 1974, but that they appear to be unwieldy and impractical to administer. It will be proposed that refinement and implementation of OC cost attribution systems be undertaken during Fiscal Year 1975. Such rescheduling would place the Office accomplishment of this Objective in the same time frame as that of the majority of other Agency components.

25X1A

- b. A new schedule and new milestones are required. Mr. is responsible for developing the plan for achieving the cost attribution objective during Fiscal Year 1974.
- 3. PROGRAM MANAGEMENT RESPONSIBILITIES. At the 30 April Executive Board meeting, OC-P&B was asked to review OC's current program management responsibilities to see if OC could develop more consistency in this area. Mr. presented the following recommendation in OCP-M-74-079 of 14 June 1974:

25X1A

The overseas areas are to budget for all maintenance contracts, renovations, repairs, paving, etc., which are performed by local (non U.S.) contractors and vendors. OC-E will have centralized responsibility for on-going support provided by U.S. contractors or by vendors and contractors providing goods and services in more than a single area. This OC-E responsibility particularly applies to any on-going support for major systems. relationship to OC-E is the same as an overseas area's.

25X1A

The Board adopted Mr. recommendation.

Approved For Release 2001/04/09 : CIA-RDP79-01577A000100040003-4

	4. NATIONAL POLICY ON AUTHORIZING U.S. CONTRACTORS ACCESS
25X1A	TO CLASSIFIED FEDERAL TELECOMMUNICATIONS OR COMMUNICATIONS SECURITY
23/1/	MATERIAL. Mr. handed out a draft of section proposed
05)/4.4	for inclusion in Office of Communications Orders titled, "Use of
25X1A	U.S. Contractors for Installation and Maintenance of Secure Tele-
	communications Systems." Mr. mentioned that the USCSB
	has recently issued a paper which provides considerable policy
	latitude for use of contractors. The purpose of including this
	new section in the OC Orders is to provide policy guidance for
	OC administration of contractors handling communications security
25X1C	information. The Board approved issuance of the proposed sections
	as a part of the OC Orders.
25X1A	F DEDONE BY OO F AND OO O ON THE
	5. REPORT BY OC-E AND OC-O ON THE STUDY. Mr.
	reviewed briefly an OC-E proposal and cost estimate for beering up major relay stations and providing some "mini-relays" as a
	protection against loss of a single major base station. The
25X1A	proposal was based on an OC-O requirement to provide 100 percent
	back-up which is not really required but which resulted in a cost
	estimate of \$1,500,000. Mr. stated that the cost could be
25X1A	reduced to approximately one million dollars.
20/(1/(25X1C
	Mr. then reviewed the proposal for building a
25X1C	relay to provide the back-up capability. Taking into
20/(10	consideration the equipment in stock earmarked for this approach
	the final cost would be approximately one million dollars.

25X1A

25X1C

Mr. then proposed an alternate approach to meeting the major base station back-up requirement. His proposal called for increasing the capabilities of existing base stations in such a manner that if any one base became unusable the essential workload could be transferred to the remaining bases. Operations would re-study and re-define the requirement to something less than 100 percent back-up. The funds required for this approach would be \$475,000 in Fiscal Year 1975 and approximately the same amount in Fiscal Year 1976. The Board approved the proposal.

Approved For Release 2001/04/09: CIA-RDP79-01577A000100040003-4

 $\,$ 6. The agenda was completed and the meeting adjourned at 1500 hours.
